FARMA Z-80 P SERIES
MDS System in pouches

Farma Z-80 P Series

The new most loved machine in the Irish market. Its compact size makes it suitable for any size of pharmacy and for dispensing up to 120 patients per week.

These machines mitigate the disadvantages in manual dosing including difficulty in tracking the cost of the service, stock quantity and errors in the preparation of trays.

Slow, repetitive, and tedious processes lead to human error. The MDS Pouch system streamline these processes leading to an efficient dispensary environment.

The final product is customisable to include from your pharmacy logo to intake icons.

Our in-home designed software **integrates with most PMR systems in Ireland**

The Z80 includes:
Robot with 80 canisters | PC all-in-one

Benefits

Traceability, security and control | Solutions for cut and uncalibrated medicines | Intelligent bases | Wide multi-patient tray

Model	Z-80 P
